To receive a bill based on actual consumption, please follow the instructions below.

## How To Read Your Meter

Meters have 4 or 5 small dials that record consumption. Adjacent dials turn in opposite directions – some turn clockwise and others turn counter-clockwise. A disk in the meter revolves as electricity is used in the premises. This disk moves the hands on the dials.

We recommend you start reading the meter from right to left and write down the figures in the same order (using the example below. That would be           ← 7 ← 4 ← 9). When the hand is between two numbers on the dial, record the lower number. The only exception is when the hand is between the numbers 9 and 0. In this case, think of the 0 as equal to 10, then 9 is the number you record because it is actually the lower number. Here is an example of an electric meter reading.

Some premises may be metered by a digital device, which makes recording easy. If digital, please record the numerical digits on the readout.

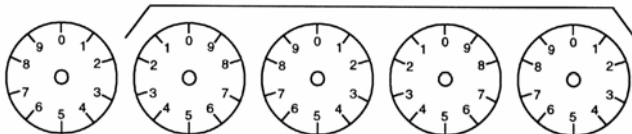

## Meter Readings

Please take the time to record the meter number, the date the meter was read, and the reading. Then fax this form to **604 528-2297** or call BC Hydro toll-free at **1 800 224-9376**, or **604 224-9376** in the Lower Mainland.
